

Welcome to the *Toxic Soup Tour* (US Trademark Pending)

“Give someone a fish and you feed them for a day. Teach them how to fish and you’ve fed them for a lifetime.” Chinese Proverb

The *TST* is more than an idea, it’s a working team of hydrology, water quality and aquatic/riparian species specialists. We are dedicated to assisting those people who are becoming increasingly concerned about how water- borne pollutants adversely impact their environs. We’ll show you the origins and causes.

As environmental advocates (enviros), our experience in dramatizing and helping to drive governmental solutions in the highly contaminated watersheds of South Orange County, California is unparalleled. Our highly-acclaimed whistleblowing, incredible watchdog activities have led to numerous EPA enforcement actions and fines of chronic violators, all accomplished without legal representation. We’ve decided to take it up a notch to a new level of activism.

The *TST* team is expanding the concept, to share our strategies and help anyone alarmed by the obvious degradation of our world’s fragile aquatic ecosystems. Fresh potable (drinking) water is finite, and there is a connection between impaired streams/water bodies and their stressed habitats. The detrimental health effects (present and future) on humans and sensitive bio-marker species are easily understood once the public becomes educated about the disturbing signs the *TST* team is all too familiar with. You **can** fight back.

Contact us and we’ll come to your part of the world, we’ll walk your region with you and for a small fee give you the tools for reform. We’ll suggest strategies and non-violent tactics tailored to your region to assist you in turning back the entropy occurring around you daily. Our researchers will try to discern which laws, regulations and ordinances apply to your unique situation, teach you how to **“motivate”** your local government to force compliance. We’ll even show you how the chronic polluters get around these rules, help you to halt their behavior.

Team TST: Roger E. Butow
